Can you guys at least start a proposal for the layers we could serve out?  
 and please tell me what layers are restricted?  
 is there a catalog that I could start to look at so we can have discussions on Monday?

thanks

Eric,  
 A couple of issues-  
 - the sheer number of layers (300+), we'll need to manage the amount of data in each view  
 - HSIP is restricted use, we may need groups or rules  
 So, when you return, let's work on it and see what makes sense  
 Thanks,  
 -dp-

Well that was the idea at first, I think  
 We were just going to have one URL for the REOC Flex App like <http://r6gis1.r06.epa.gov/Region6EOC/> (Currently no layers on it) and then just update it as a new response happened instead of having a new URL for each response I could definitely take the Los Alamos stuff off of it if you want We can make anything you want, just let me know and we will make it happen

Eric and Brett:

The apps update and file upload has been completed for the R6 EOC Flex Viewer v1 Here is a brief summary:

- 1 The automatic script process did not work this time All those folders including "data, msd, and mxd" were not copied over by that automatic script process I manually copied over those folders this morning That was the reason those 5 new services were not running this morning as Brett found out
- 2 manually created those 5 new services using those new MSD files on the orator server
- 3 The monitoring service did not work initially as Brett also noticed It was discovered that the data reference inside that "Monitoring" service was still using "\\B0606gdath008\share\ " I modified the "monitoring mxd" with the data reference from the Orator server and recreate the MSD file This new MSD was used to create the "Monitoring" service and it works fine
- 4 manually modifying some flex viewer files to replace "r6gis1 r06 epa gov" with "orator epa gov"
- 5 transfer those new flex files from orator server to "www epa gov" web server This process was interrupted by some services shutdown the NCC The problem was fixed and the NCC resources were restored later The file transfer was completed after that

Let us know if you see any problem

Thank you very much

Eric:

Just want you to know that we are experiencing serious service interruption in the EPA NCC right now. Apps updates on the Orator server were completed already. I was in a process to upload files from the Orator server to the "www.epa.gov" server when the interruption occurred. Our system admin is working on the problem right now. They should have those NCC resources up and running again very soon. I should be able to complete the file upload in a few minutes after the NCC services are restored.

Thanks

I have been working with Qi this morning on getting it updated. The script takes care of data updates on existing services, but if we add new layers that don't belong in an existing service like the monitoring sites, then the Flex code must be updated as well and we haven't gotten that part automated yet because it takes a few more manual steps. The R6 version is up to date though with the new fire data and the sites  
<http://r6gis1.r06.epa.gov/Region6EOC/>

Qi is working on the Orator flex code right now, so it should be ready in about 20 minutes according to Qi. The Orator Monitoring site service is up and running; he's just updating the flex part now.

**Subject:** Preliminary ASPECT Flight Lines for Loa Alamos Fires

Gents-

Attached are the rough flight lines for ASPECT of the Area G and Waste Storage areas. These will be modified and manipulated with more accurate coordinates as the time arrives, but these will suffice to get things started. We can mobilize in Santa Fe by mid-day tomorrow, 29 June (we are calibrating at the Grand Junction pads in the morning). Please let us know what schedule works best for you. Our flight will collect radiation, chemical and if possible imagery. Also, the infrared line scanner will be able to identify the front of the fire. If the situation changes rapidly for the bad while the plane is in the air, we are preparing to process data on the aircraft and ship it directly to the ground for a faster turn around on the situational awareness.

Please contact Mark (513-675-4753) if you have any questions or concerns.
